Objective

- Compare mortality and reserves for guaranteed issue contracts using the 2001 CSO Residual Standard Table versus 1980 CSO

AMERICAN ACADEMY *of* ACTUARIES

SOCIETY OF ACTUARIES

Copyright © 2009 by the American Academy of Actuaries
Valuation Table Team Update to LHATF
June 11, 2009

Testing

- Comparison of non-participating whole life NLP reserves using:
 - 2001 CSO Residual Standard S&U Table versus 1980 CSO Ultimate Table
 - 2001 CSO NS Ultimate Table versus 1980 CSO Ultimate Table
 - Male and female, non-tobacco classes only
- Comparison of underlying mortality rates and present value of expected claims for same risk classes as used in the reserve comparison

Comparison of Net Level Premium Reserves using 2001 CSO to those using 1980 CSO

- Products Compared:
 - Whole Life – Issue ages 35, 45, 55 and 75
 - Benefits at end of year
 - Premiums at beginning of year
 - Maturity at attained age 100
- Reserves ignore deficiency reserves
- Calculated using 4% valuation interest rate
- Compared using ANB, Nonsmoker tables

Comparison of Mortality Rates per 1,000 under 2001 CSO to 1980 CSO

- Present value of claims determined as follows:
 - Over years 1-20 and lifetime (i.e., to age 100)
 - Using 5% discount rate
 - Lapse rate = 0% (no significant difference in results if lapses included)
