

Comment 16—8/18/2021—1:42 p.m.

I think that the explanation of “Bias Topics” is not sufficiently specific. As actuaries we use data and statistics to make decisions. I think that the description of “Bias Topics” should specify that CE credits for bias must/should address how the bias topic covered can statistically influence data and decisions.

I recommend that the language in section 2.2.6(b) be changed to something like

Bias topics include content that provides knowledge and perspective that assist in identifying and addressing statistical biases that may exist in data, assumptions, algorithms, and models that impact Actuarial Services. Biases may include but are not limited to statistical, cognitive, and social biases. Part of the consideration of any bias topic should include a statistical or mathematical analysis of that bias topic.
